

Nexa Law Environmental Policy

Nexa Law Limited is committed to minimising the impact of its activities on the environment, and as such we have created an environmental policy to help identify and minimise these impacts.

The key points of this strategy to achieve this are:

- Preventing pollution from activities at our Head Office and by our consultants and staff who work remotely from home;
- Continual environmental improvement;
- Complying with applicable environmental legal and other requirements.

Nexa Law Limited aims to:

- Minimise production waste and increase recycling rates by following the waste hierarchy of reduce, reuse and recycle
- Minimise consumption of energy and water
- Minimise the environmental impact of activities on site
- Minimise emissions from vehicle use
- Promote use of materials with recycled content or from sustainably managed sources

This policy applies to the operations of Nexa Law Limited and covers those environmental aspects which we can control or influence. It will be reviewed annually, or more frequently considering significant or organisational changes. It will be made available to all staff, consultants and contractors as well as other key stakeholders through our intranet and website and it can be retrieved on request.
